

PRACTICAL INTERVIEW

TIME 3 HOURS

INSTRUCTIONS TO CANDIDATES

1. *This is a practical interview. The tests below should be tackled practically either on a web platform or mobile platform. The interview is meant to test use interface skills, database design and development skills, programming skills and creativity. All the best*

Following the steps below design and develop a native mobile application or web based application.

Step 1: Create an interface that has the following fields;

- First name
- Last name
- Username
- password

Step 2: Using the interface that you have created capture the details from the various fields created and send the captured data to a remote MySQL database.

Step 3. Create a login interface that allows users to comfortably login and view data that has been entered into the database.
